

Detection of sexually transmitted infections: Microarray-based STI and HPV diagnostics

EUROArray STI

BACTERIA / VIRUSES / PROTOZOA

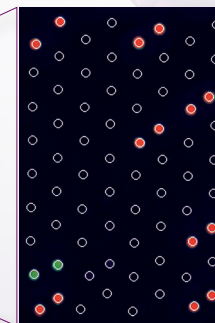

| | |
|------------------------|------------------------|
| Neisseria gonorrhoeae | Haemophilus ducreyi |
| Chlamydia trachomatis | Treponema pallidum |
| Mycoplasma genitalium | Herpes simplex virus 1 |
| Mycoplasma hominis | Herpes simplex virus 2 |
| Ureaplasma parvum | Trichomonas vaginalis |
| Ureaplasma urealyticum | |

- Prevention of infertility and miscarriage
- Detection of up to 11 relevant sexually transmitted pathogens in one test
- Reliable identification of multiple infections
- Also suitable for pathogens that cannot be cultivated

[Further information](#)

EUROArray HPV

- Detection and typing of all 30 relevant anogenital HPV subtypes in one test
- Significant results even in the early phase of an HPV infection
- Distinction between high-risk and low-risk HPV subtypes
- Reliable identification of multiple infections
