# EUROLINE Profiles <br> Autoimmune inflammatory myopathies 

New: tRNA synthetase antigen spectrum expanded by Ha, Ks and Zo

SRP = signal recognition particle; Jo-1 = histidyl-tRNA synthetase; PL-7 = threonyl-tRNA synthetase; PL-12 = alanyl-tRNA synthetase; EJ = glycyl-tRNA synthetase; $\mathrm{OJ}=$ isoleucyl-tRNA synthetase; $\mathrm{Ha}=$ tyrosyl-tRNA-Synthetase; $\mathrm{Ks}=$ asparaginyl-tRNA synthetase, $\mathrm{Zo}=$ phenylalanyl-tRNA synthetase

## Technical data

| Application | Determination of autoantibodies against myositis-associated antigens to support the serological <br> diagnostics and differentiation of idiopathic inflammatory myopathies |
| :--- | :--- |
| Antigen substrates | Membrane chips printed with individual lines of purified, biochemically characterised antigens. <br> Each group of antigens is coated onto a separate membrane chip, providing optimal efficiency <br> of antibody detection for each antigen. |
| Sample dilution | Serum or plasma; 1:101 in sample buffer. |
| Test procedure | $30 \mathrm{~min} / 30 \mathrm{~min} / 10 \mathrm{~min}$. Room temperature. |
| Automation options $\quad$Compatible with the EUROBlotOne or EUROBlotMaster from EUROIMMUN; computer-based <br> evaluation of results with the EUROLineScan software. <br> Kit format$\quad$16 or 64 membrane strips or membrane strips already placed into the EUROTrays (PreQ). <br> Kits include all necessary reagents. |  |
